

DSM COMPUTING SOLUTIONS INC.

We Take Care Of Your IT ... You Take Care Of Your Business

Managed Backup Service

Trouble Free Protection For Your Valuable Data

WHEN SMALL
BUSINESSES NEED TO RUN
LIKE BIG BUSINESSES...

THEY CHOOSE DSM

- Backing up your crucial business data is vital for the protection of your business.
- Most businesses suffer data loss due to not backing up or having unreadable backup media.
- Using methods like computer to computer, USB Hard Disk Drives and CD or DVD backup is extremely unreliable.
- It is crucial to have the latest version of your valuable business data OFF SITE as added protection.
- DSM not only securely backs up your data and protects it, the system is completely managed by DSM so you don't have to change tapes or manage the backup process.

We Do It - You Don't

If it has ever happened to you, it's a sick feeling when your computer fails or a crucial data file won't open and you can see hours and hours of work fading in front of you.

Worse is not having a backup source to turn to in order to retrieve your data.

Even worse is having a backup and finding out that the backup fails to restore your data and there really is no way to get your hours and hours of work back except redoing it, if that's even possible.

Our experience shows that you can never have enough backup and that backing up crucial business data is a task that most companies don't take seriously enough.

With the DSM Managed Backup Service, your data is backed up every 4 hours without you having to initiate it, trouble free, complete, secure and off-site for ultimate safety and security.

Managed Backup Service Features

With the DSM Managed Backup Service, you can rest assured that your data files are being backed up. Used on it's own for workstations or in addition to traditional tape backup on file server systems, data backup is done in the background automatically.

- **Secure Safe Backup—Fully Encrypted**

Fully secure and protected, your data is backed up and totally private.
From connection to storage, there is no exposure of your information.
Every touch point of your data is fully encrypted to ensure ultimate security
There is a private and secure connection for your data to reach our sophisticated off-site data centre

- **Automatic Every 4 Hours**

The backup system knows what has changed since the last backup.
All your changes are backed up every 4 hours so you have the latest data always backed up
The backup process is invisible and does not interfere with your computer use
Our sophisticated backup technology is so efficient you don't even know it's happening

- **Easy To Use - When You Need It**

Our backup navigator is easy to use to tell the system to backup your data files
Restoring data is so fast and easy - no real training is required.
You can get one file or all your data - our point and click system is intuitive and easy.
Unique music player and picture viewer lets you play music and view picture files
FROM YOUR BACKUP

- **Managed by DSM - So You Don't Have To**

Managed backup means that we monitor the process and success of the backup.
Backup data is verified to make sure it can be restored if you need it

- **Affordable Monthly Fixed Cost**

The cost of the backup service is fixed each month
Our system does not meter your data volume and charge you excess data fees
Any required service and support is included in the low monthly cost

- **Off Site And Managed To Protect You**

Having a backup off site is the best protection
Not taking a backup off site is the most prominent breakdown in backup procedures
Your backup is managed by DSM to ensure that it is successful and verified error free
Data restoration is stressful, the more options you have the better your chances of data survival

Minimize your data risks and reduce the chance of error with the DSM Managed Backup system. Used in addition to traditional tape backup system, our Managed Backup system is valuable insurance. You never know when you will need it.
