# SPAM FILTERING

## GAIN BACK CONTROL OF YOUR EMAIL

**WHEN SMALL  
BUSINESSES NEED TO  
RUN LIKE BIG BUSI-  
NESSES**

**THEY CHOOSE DSM**

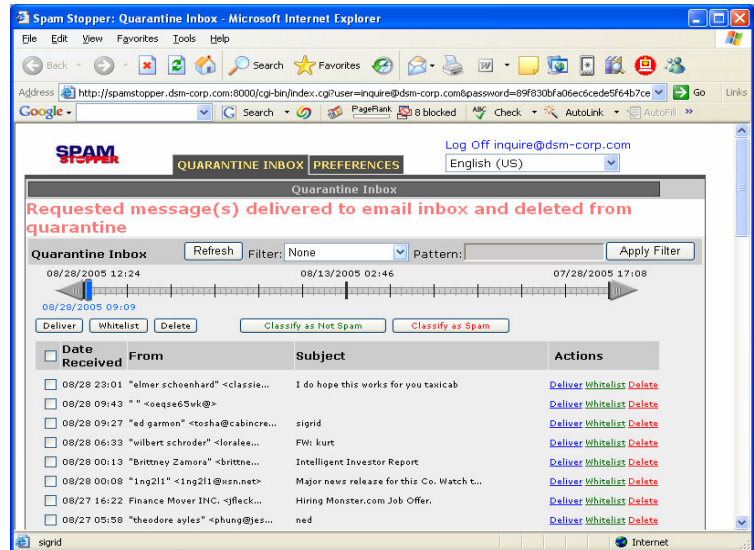

Eliminate annoying and time consuming SPAM from your Email system.

Take the pressure off your network system of having to deal with hundreds of junk mail messages and viruses each day and increase your systems performance.

SPAM Stopper does the work for you, not you or your users.

Keeps your Email up and running, even if your system is down.

Remove dangerous virus emails from your system to protect you from damaging infections that cause down time as well as high repair costs.

### **RELIEF**

It's almost like a plague, when you are on the hit list, you or your users can be inundated with literally hundreds of junk Email messages each week. This does not have to be the case. The DSM SPAM Stopper is an amazing solution that actually works to eliminate all that annoying, time consuming Email SPAM.

# DSM SPAM Stopper “Stop The Madness”

There are significant benefits to having SPAM Stopper guard your Email system that go beyond just eliminating SPAM messages...

- High level virus protection for your Email system, before the messages come into your office system environment to really protect you from infection.
- Increase the performance of your Email and network system overall by letting SPAM stopper handle all this junk mail traffic on your Internet connection and internal network system.
- Incredible intelligence ensures that only SPAM emails are kept out of your in box and that all your real Email reaches you.
- Totally safe and secure, SPAM Stopper provides non-invasive “pass through” filtering of your Email messages maintaining your confidentiality and security.
- Our amazing SPAM Stopper is built on the same technology used by the US Department of Homeland Security, The White House, N.A.S.A. and thousands of major international corporations.

## FREQUENTLY ASKED QUESTIONS

### Is there redundancy with this system?

There are two SPAM Stopper systems located in separate locations that are designed for the most possible up time. These systems are connected to the internet with multiple redundant internet connections to ensure our system experiences consistent up time.

### Does the system have backups?

No backup system is needed since your email is not stored on this system. The SPAM Stopper is a passive pass through system where Email is just checked to see if it meets the requirements of SPAM then either delivered directly to your system or held in a SPAM quarantine.

### Is our E-mail secure while in this system?

Since this is a filtering system, your E-mail is not stored in the SPAM Stopper. As such, it is not accessible by anyone other than you or anyone you allow. The only way this changes is if your Email system is down, in which case the SPAM Stopper will store your Email in a totally secure environment until your system is up and able to receive Email again. Once this happens, all your Email is totally removed from the system.

### What happens to Emails the Spam Stopper stops?

We call these “quarantined” Emails. They are stored in the SPAM Stopper in a totally secure environment that only you can access if you want to retrieve any to your Email inbox. The SPAM Stopper is efficient and correct so you rarely have valid Emails in your quarantine.

### What if the Spam Stopper goes down?

The system has a redundant backup system that protects it from down time. In the highly unlikely event that both of our Spam Stopper systems fail, Email will be interrupted until one of them is up again. This is far less likely than your internal system going down and is very low risk for your company.

### What happens if our Email system goes down?

If your email server goes down our SPAM Stopper will detect this and hold your Email messages until your system comes back online. This means that the SPAM Stopper is also a redundant Email receipt system for your internal Email system as an added benefit.

### Does all Email go through it, in and out?

The SPAM Stopper is designed to filter all your incoming email – it is not involved in your outgoing email.

### Is there a blacklist capability?

All incoming Email goes through a complete 10 stage check to determine if it is spam, based on a very sophisticated artificial intelligence system. One of these 10 checks includes a blacklist

### What version of Exchange is compatible?

The SPAM Stopper works with all Email systems, all operating systems and all types of Email servers. Since this is a pre-filtering system – it is totally hands off of your existing system.

### Is the system secure and our Email server will enjoy having to do less work?

This system is more secure than regular Email servers. You will notice a HUGE decrease in your server usage. The only email your server will get is real non SPAM Email, which will lighten the load of your system and can have a big impact on speed, resources and potential upgrade needs, saving you costs and increasing your users productivity substantially.
